

DRMS Annual Report Comments For Last Chance Permit 2020

1. The date of last exploration was 12/17/2020
2. Activity at mine site is underground and surface activity has minable visible impact
3. Work continues to define and expand on reserves on the Last Chance Permit by continuation of sampling program and geologic work
4. Nuvemco has been directly involved in providing information and comment to various federal administrative and legislative with respect to identified critical minerals and supply chains at risk. These include, but are not limited to, the U.S. Department of Commerce, the U.S. Department of Energy, the Nuclear Fuel Working Group, and the U.S. House of Representatives. We are working to reduce U.S. reliance on foreign supply on minerals, including rare earth elements, that are part of innumerable essential products such as electric and hybrid cars, computers, military equipment, batteries, and cell phones. We are also working with academia and have been a part of newly discovered minerals in Colorado whose economic, environmental, and medical benefits are yet to be developed. All of these activities are part of the process of adding economic utility and value to our permits.
5. Additionally see comments sent to Dustin Czapla dated June 21, 2019
