

Loveland M-2000-034

2021 Supplemental information

4. The permit area has been disturbed, but not by mining activity. The last parcel remaining in the permit is zoned industrial and has been used as a ready-mix concrete plant site since the 1970s. At the time of the original DRMS permitting in 2000, the site was being used as a concrete plant site and material was being imported and stockpiled onsite for use at the concrete plant. The original intent of adding this parcel to the mining permit was to give an option to mine the area after the concrete plant was removed. The concrete plant has now been removed. Martin Marietta has decided not to mine out Phase 3 or set an asphalt plant on the west portion of Phase 3. Instead we will continue to use it as industrial zoned property as shown in the Existing Conditions map of the DRMS permit application. Permit release has been requested.
