4300 Cherry Creek Drive South
Denver, CO 80246-1530

Attn: Andrea Nestler

Hi Andrea,

Enclosed are the paper versions of the annual reports and DMRs required for the following permits: COG-502111, COG-502112 and COG-502113. All three permits are currently being updated to comply with efile requirements that became mandatory December 2020. Paper reports are enclosed to comply with data reporting for the periods enclosed. Not sure if the efilings will be redundant but need to set it up for future reports. I'll call your office during business hours for questions.

COG-502111, the Ace in the Hole lode claim and COG-502112, the Godsend lode claim are under final reclamation and waiting for final inspection by CDRMS before permits can be closed out. Final grading and reseeded for these two sites occurred in 2017. No mining activities have occurred at these two sites during 2018-2020.

COG-502113, the Agnus Dei lode claim, is still an active mining permit, (limited permit for 180 days per year.) The site was only accessed a couple of times during the 2020 season for covid and other reasons. DMRs state no samples taken as there were no active runoff events during our visits to the site.

I will be working with you to comply with the efile requirements for these sites.

Thanks,

Jean Cowman
