RE: Twentymile Coal, LLC - Foidel Creek Mine (Permit No. C-82-056), Minor Revision (MR21-318) 15-Left Thickener Underflow Borehole, Pad and Pipeline Revision. Adequacy #1

Dear Ms. Lynch:

Twentymile Coal is in receipt of your adequacy review for MR318 dated 6/24/21. Please find below the responses to the items of concern:

1. Please verify if a cultural resources survey has been completed in the proposed revised location of 15L, including the pipeline corridor and access road.
 - a. Attached to this submittal is a report provided by Mefcalf Archaeology. This area of the new 15LT pad is covered under the same survey originally submitted with TR90 for the original location of 15LT.
2. Please provide the length of proposed access road and pipeline corridor to ensure the bond is still adequate or this disturbance.
 - a. In order to minimize disturbance to the vegetation we do no plan to construct a road into 15LT from 14LT. The pad site will not be visited much one operating and therefore we do not see a need for a graveled road.
 - b. The new pipeline route will be an additional 500 feet from the original scope for a total length between 14LT and 15 LT of 2050 feet.

Please let me know if you have any further questions or concerns.

Sincerely,

Miranda Kawcak
