Gunnison River Gravel Pits, Permit No. M-2009-048, Inspection Problem Abated

Dear Mr. Weaver:

On March 17, 2021 the Division of Reclamation, Mining and Safety (Division) conducted an inspection of the above referenced site. Compliance with Mine Plan was cited as a problem for importing of inert material(s) without prior approval from the Division. Corrective actions required you to submit a Technical Revision to revise the Mining Plan to allow for imported materials by the corrective action date.

On July 7, 2021 the Division a Technical Revision (TR-4) request which was approved on July 12, 2021. This satisfies the corrective action and it is considered abated.

Note that on the March 17, 2021 inspection report Signs & Markers was also cited as an inspection problem for displaying the incorrect Operators name on the mine sign. To date the Division has yet to receive photo documentation that the mine sign has been corrected. This inspection problem remains unresolved and past due. To avoid potential future enforcement actions for non-compliance with State Statutes, Rules and Regulations, and/or conditions specified in your permit for this site, please must submit corrective action documentation as soon as possible.

If you require additional information, or have questions or concerns, please feel free to contact me.

Sincerely,

Amy C Yeldell
Environmental Protection Specialist
