Patrick Lennerg area advisor
Division of Colorado Reclamation, Minning and Safety

Dear Patrick,

Goodmorning, I am writing to enquiry, if you have a signed Encroachment Agreement on file with Fremont Paving and (CIG/Kinder Morgan) for the crossing of the 248A high pressure gasoline. (M2016-009)

This line is located just East of 40th In, on the designated haul route. This permit contains 2 gas lines, currently a contract agreement is in place, for the line running through the actual gravel pit SE to NW with 2 crossings.

However, there was never an applied for or approved Encroachment Agreement for the high pressure gasoline 248A CIG, located directly under the haul route, West of the pit, located directly East of 40th In.

I have requested a copy, from Pueblo County Planning Department, directly from Director Howard they have yet to produce one.

The attached pictures are lg. water trucks using the haul route and crossing the gas line.
(4 days so far)

There is an agreement on file in pueblo. It appears, created by Fremont Paving, signed by Fremont, but no signatures from CIG/Kinder Morgan.

This is a hugh safety hazard for the community. Pueblo County and probable the state, approved these permits with no information of the gas line or an approved Encroachment Agreement signed or recorded.

Please take action immediately to correct this and please shut down the use of this crossing untill such time that CIG/Kinder/Morgan can approve this crossing.

Sincerely,
Wendi Kern
Chairperson PCAOC

- 1. Section 18 Township 23 South Range 62 West
- 2. Section 18 Township 23 South Range 62 West
- 3. Section 30 Township 23 South Range 62 West

However, the Haul Route that is under review is not part of the above noted encroachment agreement. Since this is a completely different pipeline known as the JABA Agallat Lateral, which is a 18 inch high pressure gas pipeline, a new Encroachment Agreement will need to be completed along with the following activities before drafting an agreement.

- 1. The haul route crosses Section 33 Township 23 South Range 62 West, noted as Parcel 130088001616 with Pueblo County Assessor, noted to Fremont Farming & Seed Mix.
- 2. The width of the C/O right of way is 50 feet at this location.
- 3. Load calculations will need to be completed before the installation of the haul road to determine that equipment is safe to cross over the pipeline at this location. Potholing of the pipeline will need to be completed to determine the true depth of the pipeline. All heavy equipment that will be using this haul road for construction and the haul route purposes will need to be load and C/O will complete the load calculations. Please contact me directly before any activities within the C/O right of way and I will assist in coordinating this process.

I have attached the following documents for review as this is the first time C/O has communicated to Pueblo County on this project. The attached google earth map shows all section townships and ranges impacted by this project. The red lines on the maps are C/O placelines. In addition, I have attached the enclosure.
