Re: Annual Mining Fee and Report for M-1998-103

This is the annual report associated with the annual fee assessment and map. In November of 2018 we were approved to convert from a 9.84-acre 110c permit to a 97.51-acre 112c permit. We have continued to move eastward from the old perimeter into the new area. Although still limited usage, we did mine more gravel than in the past. Approximately 7,000 ton was mined in 2021. All of which was used on projects and maintenance within the town of Limon. There is approximately one acre of exposed mining area in the permit area. There is approximately 2000 ton pushed up.

On the map I show the approximate border of the acres that is owned by the Town of Limon, which is marked in black. The red area is the current portion that is opened and is sloped, but not reclaimed. In blue I show the two areas of where top soil is piled for when reclamation will take place.

I attest there was no groundwater exposed or encountered during the excavation or removal of the gravel from the borrow area.

Sincerely,

A handwritten signature in blue ink, appearing to read "Greg Tacha", is written over a faint, larger blue outline of the same signature.

Greg Tacha, Manager  
Town of Limon
