Good Morning Patrick,

Pursuant to Rule 3.1.7(9), this email provides the notification of concentrations above Colorado state ag standards in groundwater samples collected as part of the recent 1st Quarter 2022 sampling event at GCC's Pueblo Facility. On April 12, GCC received a laboratory report from ACZ Laboratories indicating concentrations above the ag standards in the sample collected from MW-6 on March 22<sup>nd</sup>. The report provided the following results:

Parameter	State Ag Standard	Results (MW-6)
Units	ug/L	ug/L
Selenium	20	46.5

Note I am still expecting analytical results for the following monitoring wells MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, and MW-14, and expect those analytical reports within the next week or two. Results for MW-7 and MW-2B were also included in the analytical report received on April 12<sup>th</sup> and those samples did not have any exceedances of the applicable standards. GCC will proceed to complete our data review, validation and verification process and will send the field and laboratory records in the annual report.

Let me know if you have any questions.

Regards,

Amy
