Good afternoon Sheri,

Again you have raised serious accusations about perjury and falsification, DRMS does not adjudicate property rights disputes so this is all a bit out of our wheelhouse. I will discuss this matter with the minerals program supervisor and our legal counsel as I am not clear on what if anything we can do at this point. I guess my main question is knowing that Mr. Eiberger was fully aware of the application and his right to object, why did he not do so when the public comment period was open? The review and comment period for this application ended long ago.

Mining is offset from the Ski Lake and AI is monitoring the water levels and appears to have been regulating the water level in the lake with the cooperation from Mr. Eiberger from my understanding.

Peter is completing his inspection report for the Wattenberg Lake site regarding your complaint. As was suspected, a small portion of land was affected outside of the Wattenberg Lakes permit boundary. This area is now within the Baurer Pit permit boundary. Peter will send you a copy of our inspection report when it is completed.

Jared
