**RE: Revenue Mine, Permit No. M-2012-032, Quarterly Milling Report, Second Quarter of 2022,
Clarifications Request**

Dear Mrs. Staub:

On July 14, 2022 the Division of Reclamation, Mining, and Safety (Division) received the Second Quarter Milling Report for 2022, for the Revenue Mine as required by TR-15. The activity report notes that generally no activity has occurred on site for the second quarter. Additionally it is noted that the majority of the reagents have been removed from site and that none were used. Please provide the Division with an inventory of the current reagents and volumes presently stored on site by **Friday, July 29, 2022.**

As a reminder OSMI has committed to removing all chemicals from the mine during periods of temporary cessation, per TR-14. If the site is to remain inactive all chemicals shall be removed prior to making a request. Please provide the Division with documentation if/when this occurs. Similarly the Division recommends that activities like final tailings placement occur during the summer months while feasible to ensure good housekeeping and compliance with the permit and Rules.

If you require additional information, or have questions or concerns, please feel free to contact me

Sincerely,

Amy Yeldell
Environmental Protection Specialist
