**SUBJECT: Extension for Groundwater and Surface Water Report**

Mr. Lennberg,

The 1<sup>st</sup> quarter of the Groundwater and Surface Water Monitoring Plan came to a close on June 30<sup>th</sup>, 2022. The first report analyzing this data was originally scheduled for release on August 1<sup>st</sup>, 2022 which includes May and June results. Due to the extensive nature of the analytes being tested, over 5 sampling points for Groundwater and 3 sampling points for Surface Water, Grand Island Resources, LLC requests an extension of 2 weeks to ensure the data can be properly analyzed. A laboratory out of state had to be utilized for various analytes. This exacerbated lead-times for receiving the completed result sets and as all results they were received late last week. Grand Island Resources, LLC is in the process of formulating a comprehensive report for DRMS and will submit the analyzed data over in the requested extended timeframe.

Respectfully Submitted,

Daniel J. Takami, President  
Grand Island Resources LLC
