Good morning Rob,

I have attached a short document that provides a few photos of the recent work to the site. I will continue to update you as we proceed through the removal process. As previously mentioned, the city anticipates getting inmate work release crews this fall/winter in hopes to completely remove all Tamarisk and Russian Olive. Please let me know if you have any questions.

Thank you,

Corrective Action: North Delta Pit Invasive Species Removal

Photo 1. Image is provided to depict the current health of the Tamarisk. Most of the Tamarisk on-site appears to be affected by disease. Directly north of lake.

Photo 2: City employee actively spraying weeds on-site. Northwest corner of the lake.

Photo 3: Area near shed and entrance on-site that was recently sprayed.

Photo 4. Southwest corner of the lake. Crew actively removing Tamarisk and Russian Olive. Tordon used on the base/stumps.

Photo 5: Piles of Russian Olive along the west perimeter of the lake. Hand removed before spraying slopes for invasives/weeds.
