Leigh,

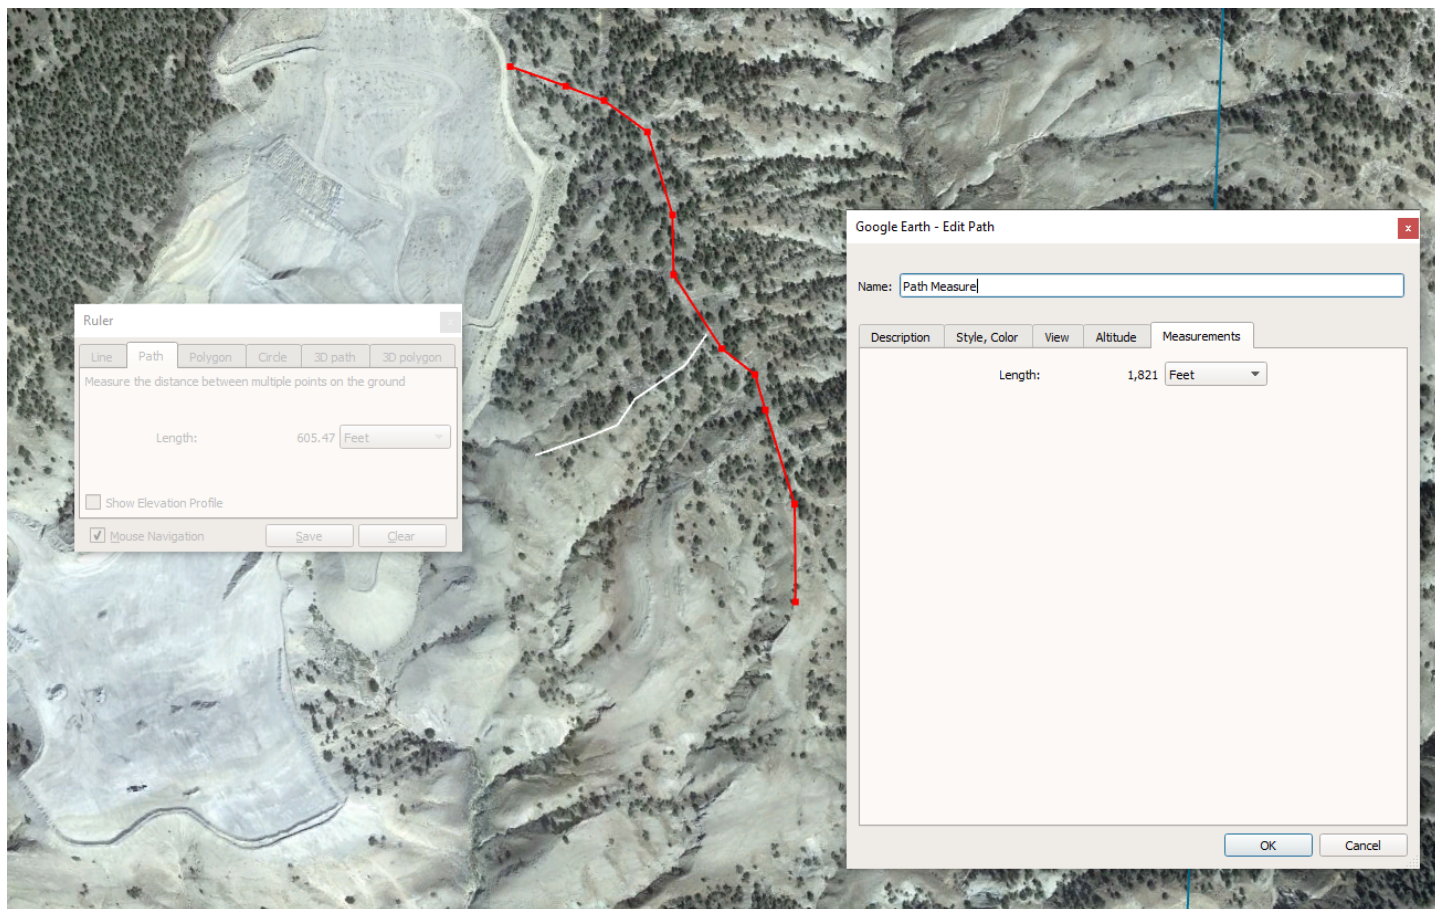

Here is the data for the planned drilling, right from the drillers quote:

We propose the following:

- Drill 7 7/8" air rotary surface hole and set and seal temporary 6" PVC casing (if needed)
- Drill 4 7/8" air rotary to TD. Collecting samples as required.
- Abandon hole once logging is complete. Retrieve temporary surface casing upon completion

Drill pads will be the same width as the roads we construct with our D9 dozer. Our dozer has a 15.3 ft blade on it and we intend to construct around 4,500 ft of roads. I tried to lay out the paths in google earth, shown in the screen shots below along with the intended length of each segment. This square footage works out to about 1.58 acres.

Please let me know if you have any more questions, or if you would like to talk about it over the phone I will be available on Monday.

Have a good weekend!

Jon Edeen
