

## MEMORANDUM

Date: October 10, 2022  
To: Patrick Lennberg, DRMS  
From: Brock Bowles, DRMS  
RE: Goose Haven Pit (M-2010-071), AM2  
Request to review adequacy responses (Oct. 5, 2022) that relate to ground water

---

On October 5, 2022, Weiland, Inc. (on behalf of City of Lafayette) submitted responses to the DRMS August 2, 2022 adequacy questions. I am requesting you to review the adequacy questions that pertain to the outstanding ground water issues. These are questions 8 and 9 of the response.

The City of Lafayette is proposing to install a clay lined pit within 200 feet of residential homes on the western boundary of the pit. The clay lined pit has the potential to interrupt the flow of ground water around these properties. Weiland Inc. concludes there will be no effect from the clay lined pit on the water table.

The decision date for AM2 is October 10, 2022, which is also the 365<sup>th</sup> day from which the application was deemed complete. This matter will be scheduled for a Board hearing in the near future at which your analysis of the ground water data will be important. Please submit your adequacy questions to me before October 24, 2022 as we will continue to work on the adequacy issues up to the Board meeting.
