Re: Lorencito Canyon Mine
Permit C-1996-084
2022 Annual Reclamation Report

Dear Mr. Bowles:

Enclosed is the Annual Reclamation Report form for 2022 for Lorencito Canyon Mine, calculation sheet for areas on the mine site, and 2022 ARR Map.

Activities in 2022 included noxious weed control using Tordon to combat occurrences of Canadian Thistle, Hounds-Tongue, and Knapweed. The entire mine site was sprayed for noxious weeds from the months of April to September. NECC also performed ditch and culvert maintenance as appropriate throughout the mine site.

Areas of reclamation were regularly inspected for erosion including for the formation of rills or gullies that would require minor maintenance. Persisting rills were combated with the use of branches. NECC continues to work its way throughout the site to rid the site of all rills. These inspections, as required by the mine's Rill and Gully Inspection Plan were conducted at least monthly by NECC staff during the period from April to October and additionally, after significant precipitation events.

The only minor change to the report from last year's report includes the re-disturbance of about 0.1 acres for the sediment drying area located above fill 8 as reflected on the map. This area was previously accounted for in surface disturbance, but the 0.1 acres has been removed in the seeded, backfilled and graded, and topsoiled parts of the attached report.

This report, required by Rule 2.04.13, is due by February 15 of each year, or other date, as agreed upon by the Division. It should include text, discussion, and maps, at a minimum, in addition to any other reclamation monitoring data as required by the approved permit. The location of the acreage reported under each land status category and year of seeding (if applicable) should be clearly identified on a map included with the report.

Land Category	Last Year's Cumulative Total (from last year's ARR)	This Calendar Year			Cumulative Total
		Acres Added (+)	Acres Subtracted (-)		
Acreage in Active Mining Areas ¹				=
