RE: Catalix International, LLC Precious Mine Exploration Permit NOI P-2013-008

Dear Amber:

Enclosed is a request for extension for the corrective action work on the Precious Mine Exploration Permit for 30 days, until 3/22/2023. Since Highwall smoothing is involved in the work, any snow on site could delay the work since no smoothing or backfilling will occur if significant snow is present. Currently, we have contacted Jim McChristian, the landowner, who has agreed to conduct the work. I will notify you when the work is started.

As soon as the highwall and other piles are regraded, the new disturbance will be seeded with the seed mix outlined in your Inspection report of December 23, 2022. It is also listed below:

Rangeland grass mixture including Vaughn Sideoats grama (9.00 PLS/acre), Lovington Blue grama (3.00 PLS/acre), Native Sand dropseed (0.50 PLS/acre), Arriba Western wheatgrass (1.00 PLS/acre), and Galleta grass (0.50 PLS/acre).

Once the area is seeded, the Abandonment Report will be filed. If you conduct a field inspection of the work, please let me know in advance so I can arrange for Jim McChristian to be present.
Thanks, Amber.

Sincerely,

Greg Lewicki, P. E.
