

Permittee Name: Siloam Stone, Inc.  
Permit No: M-1987-086  
Operation Name: Bedrock Mine  
Anniversary Date: 03/16/2023

---

**Supplemental information** (as of 3/15/23)

8. NO new area was disturbed this year. We continued to also mine in previously disturbed areas (Brown). The stone yard storage area remains unchanged from last year at 22.62 acres. There are currently 55.3 acres  $\pm$  disturbed at the mine. Of this, 13.55 acres is industrial area (Stone Yard) that does not need to be reclaimed as allowed for in the Permit.
10. We continue to cleanup the pre-law disturbed area by filling, graded, and shaped the areas around the perimeter of the area.
11. If we expand this year it will be along the north side of the stone mining area. The Stone Yard area is industrial area and would need no reclamation if mining ended prematurely. We continue to add and remove stone from the TSSA's as market demands dictate.
13. At this time there are 5.75 acres  $\pm$  (green) that have been shaped, graded, resoiled and seeded and 3.69 acres partially reclaimed. The 10th growing season starts this year on the western section of the area and the grasses are growing as expected.
15. We have approximately 63,100 cy of topsoil saved for reclamation, (tan). We still have 0.1 acres (1200 yds) of overburden stored around the mined area.
19. The current \$108,619 bond set in August 2020 is adequate to reclaim the disturbed areas.
22. The Annual Report Map is an excerpt from the application map showing the southeast portion of the mine where mining activities are taking place at this time. As a reminder within the permit area for this mine are 2 other mines, The Pinon Mine, M-1997-094 (6.26 ac  $\pm$ ) and the Siloam Pit, M-1977-326 (9.99 ac  $\pm$ ) with separate bonds.
