Re: File No. M-2020-035, 23 1/4 West Pit, 112c Permit Requirements, Wetland Delineation Received

Dear Mr. Doody:

On November 4, 2020, the Division of Reclamation, Mining and Safety (Division) approved your 112c mining permit application. Areas around the Wilsea Drain were identified as possible wetlands by the National Wetlands Inventory. The Division required that prior to any disturbances of potential wetlands the Operator conduct a wetlands survey and provide the Division with the findings. On March 29, 2023, the Division received the required Wetlands Delineation for the permit area. Based on this report wetlands have been identified. If the Mining and/or Reclamation Plan needs to be modified to accommodate for these areas and to comply with Rule 3.1.6, a Technical Revision would be required. Additionally the Operator shall comply with all requirements of the U.S. Army Corps of Engineers (ACOE).

If you have any questions, please contact me.

Sincerely,

Amy C. Yeldell
Environmental Protection Specialist
