RE: Collett Property, File No. M-2022-051, Comments Regarding Construction Material Special (111) Operation Reclamation Permit Application Package

Dear Mr. Hurley:

On April 10, 2023 the Division of Reclamation, Mining and Safety (Division) received comments regarding the above referenced application from Army Corps of Engineers. Please add this document (attached) to your permit file records.

If you require additional information, or have questions or concerns, please feel free to contact me. Amy Yeldell at the Division of Reclamation, Mining and Safety, Room 215, 1001 E 62nd Ave, Denver, CO 80216. Direct contact can be made by phone at 303-866-3567 Ext 8183 or via email at amy.yeldell@state.co.us

Sincerely,

Amy Yeldell
Environmental Protection Specialist

Thank you for requesting comments from our office regarding the proposed subject project or activity that may have the potential to impact aquatic resources. We appreciate that you are considering our potential regulatory role in the project, but we do not currently have the ability to provide project-specific comments. If the activity should have the potential to result in the discharge of dredged or fill material into waters of the United States, then the project proponent should work directly with our office to acquire necessary Corps permits, if applicable, as described in the following general comment:

Section 404 of the Clean Water Act requires a permit from us for the discharge of dredged or fill material into waters of the United States. Waters of the United States may include, but are not limited to, rivers, streams, lakes, ponds, wetlands, wet meadows, and seeps. To ascertain the extent of waters on the project site, the applicant should prepare a delineation of aquatic resources, in accordance with the applicable standards, including the 1987 Wetland Delineation Manual and the South Pacific Division Minimum Standards for Acceptance of Preliminary Wetlands Delineations. These standards can be found on our website at: <https://www.spa.usace.army.mil/Missions/Regulatory-Program-and-Permits/Jurisdiction/>.

An aquatic resource delineation should be evaluated prior to designing a project to ensure the project proponent avoids and minimizes impacts to waters of the United States to the greatest practicable extent. The range of alternatives considered for this project should include alternatives that avoid and minimize impacts to wetlands, streams, or other waters of the United States. Every effort should be made to avoid project features which require the discharge of dredged or fill material into waters of the United States. In the event it can be clearly demonstrated there are no practicable alternatives to discharging dredged or fill material into waters of the United States, compensatory mitigation may be required.

For more information about our program or to locate a list of consultants that prepare aquatic resource delineations and permit application documents, please visit our website at <https://www.spa.usace.army.mil/Missions/Regulatory-Program-and-Permits>.
