Good afternoon Tony,

Attached is an amended Inspection Report for the complete inspection of the New Horizon Mine in May. Please feel free to contact me if you have any questions or concerns.

Sincerely,
Clayton Wein
Environmental Protection Specialist

Revised_New Horizon Mine, C-1981-008, May 2023 Complete Inspection Report_CCW.pdf 1027K

PERMIT INFORMATION

Permit Numl	C-1981-008		
Mine Name:	Nev	v Horizon	Mine

Operator: Elk Ridge Mining and Reclamation,

LLC

Operator Address: Mr. Tony Tennyson P.O. Box 628

27646 West 5th Avenue Nucla, CO 81424 **County:** Montrose

Operation Type: Surface Permit Status: Active Ownership: Private

Operator Representative Present:

Mindy Sickles

Operator Representative Signature: (Field Issuance Only)

INSPECTION INFORMATION

Inspection Start Date: May 23, 2 Inspection Start Time: 11:35 Inspection End Date: Inspection End Time:	023		Inspection Type: Coal Comple Inspection Reason: Normal I& Weather: Clear	•

Inspection Topic Summary

NOTE: Y=Inspected N=Not Inspected R=Comments Noted V=Violation Issued NA=Not Applicable

N - Air Resource ProtectionR - Availability of Records

N - Backfill & Grading

N - Excess Spoil and Dev. Waste

N - ExplosivesN - Fish & WildlifeR - Hydrologic Balance

Y - Gen. Compliance With Mine Plan

N - Other

N - Processing Waste

R - Roads

R - Reclamation Success

N - Revegetation

N - Subsidence

N - Slides and Other DamageR - Support Facilities On-site

R - Signs and Markers

N - Support Facilities Not On-siteN - Special Categories Of Mining

R - Topsoil

COMMENTS

This report documents the Division's observations taken during a complete inspection of the New Horizon Mine conducted on May 23, 2023. The inspection was conducted by Clayton Wein of the Division. Mindy Sickles represented the operator, Elk Ridge Mining and Reclamation LLC, for the inspection. The weather was clear with a temperature of 67 degrees F. The ground conditions were dry with some muddy areas.

AVAILABILITY OF RECORDS – Rule 5.02.4(1):

The records for the New Horizon Mine are located at the mine office just south of 5th street. The records were well kept and up to date. For more details please see the Availability of Records Form attached to the end of this report.

HYDROLOGIC BALANCE - Rule 4.05

Drainage Control 4.05.1, 4.05.2, 4.05.3; Siltation Structures 4.05.5, 4.05.6; Discharge Structures 4.05.7, 4.05.10; Diversions 4.05.4; Effluent Limits 4.05.2; Ground Water Monitoring 4.05.13; Surface Water Monitoring 4.05.13; Drainage – Acid and Toxic Materials 4.05.8; Impoundments 4.05.6, 4.05.9; Stream Buffer Zones 4.05.18:

Stock Pond SP-2 was holding water during the inspection. There was no discharge through the primary spillway. The pond's embankment was stable with vegetative cover (Photo 1). There were no indications of erosional features. The primary outlet for the pond was clear of debris. The bottom of Pond 012 was damp at the time of the inspection (Photo 2). The primary outlet for the pond was observed to be free of obstructions. There were no indications of instability or erosion on the embankment. The embankment was covered with vegetation. Pond 013 was impounding water from the French drain and from irrigation waters (Photo 3). The level of water in the pond was entering the discharge outlet. The outlet was clear of debris and functioning as designed. The pond's embankment was vegetated and stable. No erosional features were identified. Pond 015 was dry (Photo 4). The embankment was stable with some vegetative cover. The minor rills observed on the pond's embankment had not enlarged during the spring. The outlet for the pond was unobstructed. Pond 016 was holding water during the inspection (Photo 5). No discharge was observed from the pond. The outlet was clear of debris. Pond 016's embankment was stable with vegetative cover. There were no erosional concerns identified. Pond 018 was observed to be dry. The outlet for the pond was unobstructed. The embankment was stable with vegetation. No indications of erosion were identified.

The remaining disturbed area at the mine site have berms installed on the down-gradient locations. Berms at the mine site were covered with vegetation and stable. There were no breaches or off-site impacts observed.

ROADS – Rule 4.03

Construction 4.03.1(3)/4.03.2(3), Drainage 4.03.1(4)/4.03.2(4), Surfacing and Maintenance 4.03.1(5) and (6)/4.03.2(5) and (6), Reclamation 4.03.1(7)/4.03.2(7):

2700 Road and BB road were traversed during the inspection to reach the permitted areas of the New Horizon Mine. 2700 Road and BB Road are county roads and are not required to be maintained by the operator. Both roads were in good condition and stable. No erosional concerns were identified.

RECLAMATION SUCCESS - Rule 4.15, Rule 3:

Irrigated Pasture area 10 (IP-10) was stable with vegetative cover. A section of IP-10 appeared to have topsoil recently placed on it. The ground in that section was bare and no vegetative cover was noted. The section with replaced topsoil was stable and there were no indications of erosion.

Irrigated Pasture areas 8, 9 and 11 are located to the northwest of IP-10, across the intersection of 2700 Road and BB Road. All three irrigated pasture areas were stable with vegetative cover. No erosional features were identified.

Located surrounding IP 9 and 11 are Dryland Pasture areas 10, 11, 14, 15 and 18. At the time of the inspection all five of the dryland pasture areas were stable with green vegetative cover. There were no erosional concerns observed.

There are 5 stockpiles of Bench 1 Material placed within Section 36. The stockpiled material was observed to be stable with no erosional features. There was no indication of loss of subsoil resources.

Irrigated Cropland No. 1 (IC-1) is to the west of IP-10 across 2700 Road. IC-1 was covered with established vegetative cover (Photo 6). The field was stable and there were no erosional features observed.

SUPPORT FACILITIES - Rule 4.04:

The support facilities for the mine are located to the southeast of the majority of the remaining New Horizon Mine, on the south side of 5th Street. The pad for the min office and shop had no erosional concerns identified and was stable. Any runoff from this pad is directed to Pond 18. The pad was well kept and no non-coal waste was identified. The access road leading south from the shop to Pond 18 had been recently rutted up by a large vehicle. The access road will be regraded when ground conditions allow.

SIGNS AND MARKERS – Rule 4.02:

There were many mine identification signs posted along the permit boundary. The signs were posted in unobstructed locations and displayed the current information about the permittee, the permit and the Division. Stream buffer zone markers were in place along the south side of Tuttle Draw as required by the permit. The markers were found in clear locations.

TOPSOIL – Rule 4.06

Removal 4.06.2; Substitute Materials 4.06.4(4); Storage and Protection 4.06.3; Redistribution 4.06.4:

Topsoil stockpiles 4, 5, 11A (Photo 7), 11B (Photo 8), 12 (Photo 9) and 13 were visited during the inspection. The topsoil piles were observed to be stable with sufficient vegetative cover. The perimeter ditches for the piles were stable and in good condition. No erosional concerns were identified. There was no loss of topsoil

resource observed. Topsoil pile markers were observed at each of the stockpiles. The signs were posted in unobstructed locations.

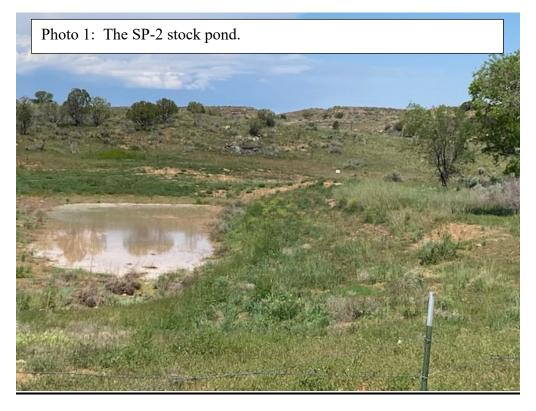

DOCUMENTS RECEIVED: None

OTHER (SPECIFY): None

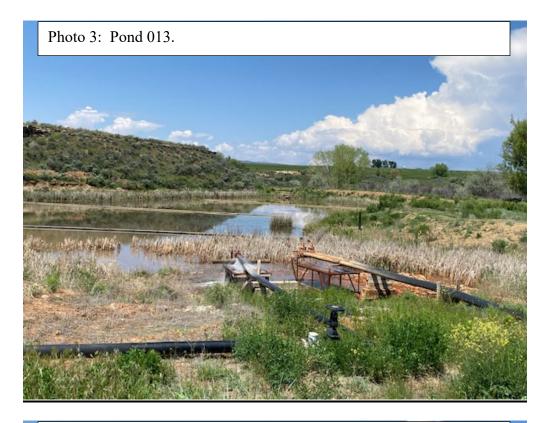

ENFORCEMENT ACTIONS/COMPLIANCE

No enforcement actions were initiated as a result of this inspection, nor are any pending.
