FROM: Charles Spielman

REF: CDRMS file No. P-2023-004

Dear Elliot and Ray—

As planned, I accompanied Jennifer Migliorato along the bottom of Park Gulch on our Goldpark King No. 2 Claim while she searched for indications of wetland along the drainage trace in the bottom of the Gulch. She studied the bottom of the gulch at each of the two sites we've picked for trenching, extending her search 100 ft upgrade and 100 ft downgrade.

Either by digging in the soil or examining plant indicators, she delineated and flagged a narrow wetland at the bottom of the gulch at each of these two sites.

As a result, we will not cross the drainage trace with trenches at either site, but will lay out a T-shaped trench pattern on the northeast side of the drainage trace. The wetland is only about 10-12 ft. wide in the drainage trace and is located in the very bottom of the drainage. This allows enough space for us to place a small berm between the trenching and the wetland to catch any potential runoff.

I believe this wetland delineation is the final step we needed to complete in order for you to proceed to approve our NOI, CDRMS file No. P-2023-004.

Regards,

Charlie Spielman

Good Morning, Ray,

I spoke with Elliott Russell this morning; he will send me an e-mail today listing several items the DRMS wants addressed before approving our NOI. He will, I believe, include 2 items needed from the USBLM Re your approval of our plan:

1. A revised seed mixture for reseeding areas impacted by our program; I asked Sophia for USBLM input on this, but didn't receive a recommendation from her.
2. USBLM approval of our plan revision eliminating the 2900-ft access road and accessing the trenching sites "overland."

I expect he will send you an electronic copy of his e-mail to me; but this is to provide you a "heads up" ahead of that, to expedite final approval of our trenching program, hopefully today or tomorrow, May 31st.

Regards,

Charlie Spielman
