RE: J-Bird Mine, Permit # M-2005-050

Notice of Operations;

The J-Bird Mine will resume activity starting on approximately Nov 6, 2023. Permission from the Mine safety and Health Administration approval will be sought. Activities will begin immediately after MSHA approval and DRMS approval are granted.

All storm water structures are still in place.

Equipment to be set on surface will include air compressors, ventilation fans, and generators. A small portable building for securing communications equipment will be set.

Underground equipment will run on surface also and consist of a skid-steer loader and small haulage units of ten ton capacity or smaller.

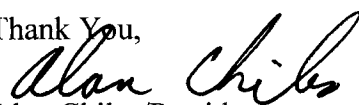

All fuel tanks will be day use only with secondary containment. Fuel will be hauled in a pickup truck with a capacity of 100 gallons and delivered each day. Oil containers will be 5 gallons or less and stored within secondary containment.

Water will also be hauled in for drilling operations and a truck or trailer may be left on site between loads.

Activities will commence with the rehabilitation of the drift. This will be followed by an underground exploratory drilling program. Then drifts will be developed to the ore bodies after the completion of the underground drilling program. Production will begin when a purchase schedule is established by a mill.

Please contact me at 970-417-1239 if you have questions or concerns.

Thank You,

Alan Chiles/President
