Memorandum

To: Engineering Task Force

From: Amy Yeldell, EPS

RE: Mid-Continent LST, M-1982-121, Request for Review of Rock Failure and Stability Report

Dear Engineering Task Force,

The Mid-Continent LST is a 112c Limestone Quarry located on BLM in Garfield County just south of Glenwood Springs, Colorado. On January 18, 2023 a Slope failure occurred at the site. The site production bench was immediately put under a C&D by MSHA via a 103K Order. An RTB was issued on March 2, 2023. On June 2, 2023 the MLRB accepted the Stipulated Agreement between RMR, Aggregates, Inc. (Operator) and the Division.

Per the Agreement On September 1, 2023, the Division has received the completed Rock Failure and Stability Report. The first report characterizes the overall site conditions that lead up to the slope failure and the details of the event. The second report is the stability plan moving forward. I am requesting assistance from the Task Force to review the provided documents and provide feedback or questions as necessary. The Task Force shall determine if the information submitted is acceptable to the Division as a path moving forward. And ensure that the Report / Plan complies with the Act and the Rules. Both MSHA and BLM will also be reviewing this information to ensure it complies with their Rules and Regulations. Please provide your feedback by September 29, 2023.
