RE: Hole Abandonment Report for Carter-Raymond Exploration P-2019-011

Dear Mr. Czapla,

In 2022 CRG Mining did perform a surface drill program on the Carter-Raymond Exploration NOI P-2019-011. This drill program had 9 drill holes at an average depth of 400'. The holes were then surveyed and sealed. The sealing of the holes included a down holes foam followed by concrete and then topsoil replacement. There was no other exploration activity on this NOI and this will conclude our NOI exploration on this site.

Best Regards,
