

Notes:

The effective date of all information is September 5, 2022.

We continued to remove material from stockpiles and the mined area. The mine was last inspected in December 2022.

7. No new mining was done this year. Material was removed from a large stockpile mined previously.

9. No reclamation is required at this time.

15. This mine was opened before 1975 and the original operator did not save topsoil. We continued to mine the area he stripped until 2009 when we opened a new area on the east side of the mine. What little soil was available from that small area has been stockpiled around the stripped area for use in reclamation.

21. Please refer to the 2023 Annual Report Map for location of the areas of disturbance in the mine.
