

DRMS REPORT 2023 (27 OCT 2023) M2013-031 NEW HAY CAMP PIT

WALLACE PIT LOCATED TO NORTH AND EAST

No change in affected land below this line in remainder of the permit area.

AREAS AS LABELED ABOVE:

AREAS D&A (Northwest corner) have been grubbed and stripped, with mining to be done in 2023-2024.

In 2022-23 mining was able to continue to a greater depth in the "past/current mining" area above so no need to expand as reported in 2022 report.

S Primary stockpile of soil for reclamation, as presently configured. Additional smaller transient piles of overburden and soil exist at various location in the "currently mining" area (not shown).

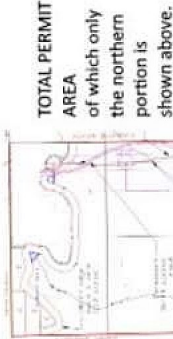

W WAPA Power Pylon with unaffected land in required setback to protect pylon and allow access.

Buffer Zone: Not significantly affected at present but may be affected in the future as part of reclamation and for storage of soil.

Currently mining: 19 acres, including active access roads, excavation, highwalls, plant locations, and stockpiles. Some transitory storm water control measures (basins, etc.) and stockpiles are located in the area, together with equipment storage. Stripping in 2023 of 6.0 acres.

At final grade: 15 acres at final grade and not involved in active mining do NOT have soil placed and are not seeded.

Blue triangles are storm water retention basins but empty of water at this time.
