To: Graham Roberts <graham.roberts@trappermine.com>, Robin Reilley - DNR <robin.reilley@state.co.us>

Good Morning Mr. Roberts,

Please find the Divisions' Review of the September 2023 and Q3 DMRs for Trapper Mine. With the exception of the pH registering close to its maximum at Johnson Pond #10, no concerns were noted.

Thank you

Robin Reilley, M.S. GISP

Re: Trapper Mine (Permit No. C1981-010)
Review of September 2023 and quarterly Discharge Monitoring Reports

Dear Mr. Roberts:

The Division has received and reviewed the September 2023 and the quarter 3 (Q3) Discharge Monitoring Reports (DMRs), including the chronic and acute Wet testing results for the Trapper Mine. The DMR's were received electronically by the Division on 25 October 2023. Thank you for your timely submittal of this information. Trapper submits DMRs to the Division, in accordance with Rule 4.05.13(2)(a)(iii).

Trapper reported the following outfalls discharged in September:

- Johnson System Pond #10, NPDS 10
- No Name Pond #5 NPDES 002
- East Pyeatt Pond #2, NPDES 011
- Middle Flume NPDES 020

Trapper reported that none of the outfalls requiring acute or chronic WET testing discharged. Monthly DMRs for discharging outfalls: 001, 002, 011 and 020, indicated that no parameters were exceeded. DRMS notes that Johnson Gulch Pond #10 registered a pH of 8.8, close to the 9.0 pH maximum allowed.

The Division does not have any questions, concerns or further comments at this time. If you have any questions or need additional information, please contact me.

Sincerely,

Robin Reilley, M.S. GISP
