RE: DRMS Permit M1973-021; Morrison Quarry; Technical Revision 9 (TR9) – Approval of
Request for Extension of Decision Date

Mr. Whitmer:

The Division of Reclamation, Mining and Safety received Technical Revision 9 (TR9) for the above listed permit on October 31, 2023. The decision date for this revision was previously set for November 30, 2023. Although DRMS has already provided adequacy comments for the majority of the proposed revision, it is still reviewing the geotechnical component of the submittal. On November 20, 2023 DRMS received a request for an extension to the decision date for this revision to allow for additional time for Holcim to address all adequacy issues.

DRMS will extend the decision date for this TR to December 31, 2023. This will allow additional time for Division review of the geotechnical submittal, and for the applicant to address all adequacy issues.

Please be advised that if you are unable to satisfactorily address any concerns identified in this review before the revised decision date of December 31, 2023, it will be your responsibility to request an extension of the review period. If there are outstanding issues that have not been adequately addressed prior to the end of the review period, and no extension has been requested, the Division must deny this revision. This letter shall not be construed to mean that there are no other technical issues in the submittal. Other issues may arise during the review process, or as additional information is supplied.

If you have any questions, please contact me at (303) 229-9414.

Sincerely,

Eric Scott
Environmental Protection Specialist
