RE: Fremont Paving and Redi Mix, Inc. McCumber Pit M2000-151 (TR-2)
Adequacy Response #1

Please see the answers to the Adequacy Review #1 questions.

1. Fremont will use a dozer to reclaim the slopes to a 3H:1V and will use a cut and fill method. Fremont will reclaim concurrent to mining.
2. The maximum length of the highwall will be 650 feet.
3. Fremont requests the affected area boundary to be the same as the permit boundary. The previously submitted map should designate both the permit and affected area boundaries. Enclosed is a map showing Phase 1 as it currently stands. Fremont would like to keep the current phasing as designated in the attached phase map.

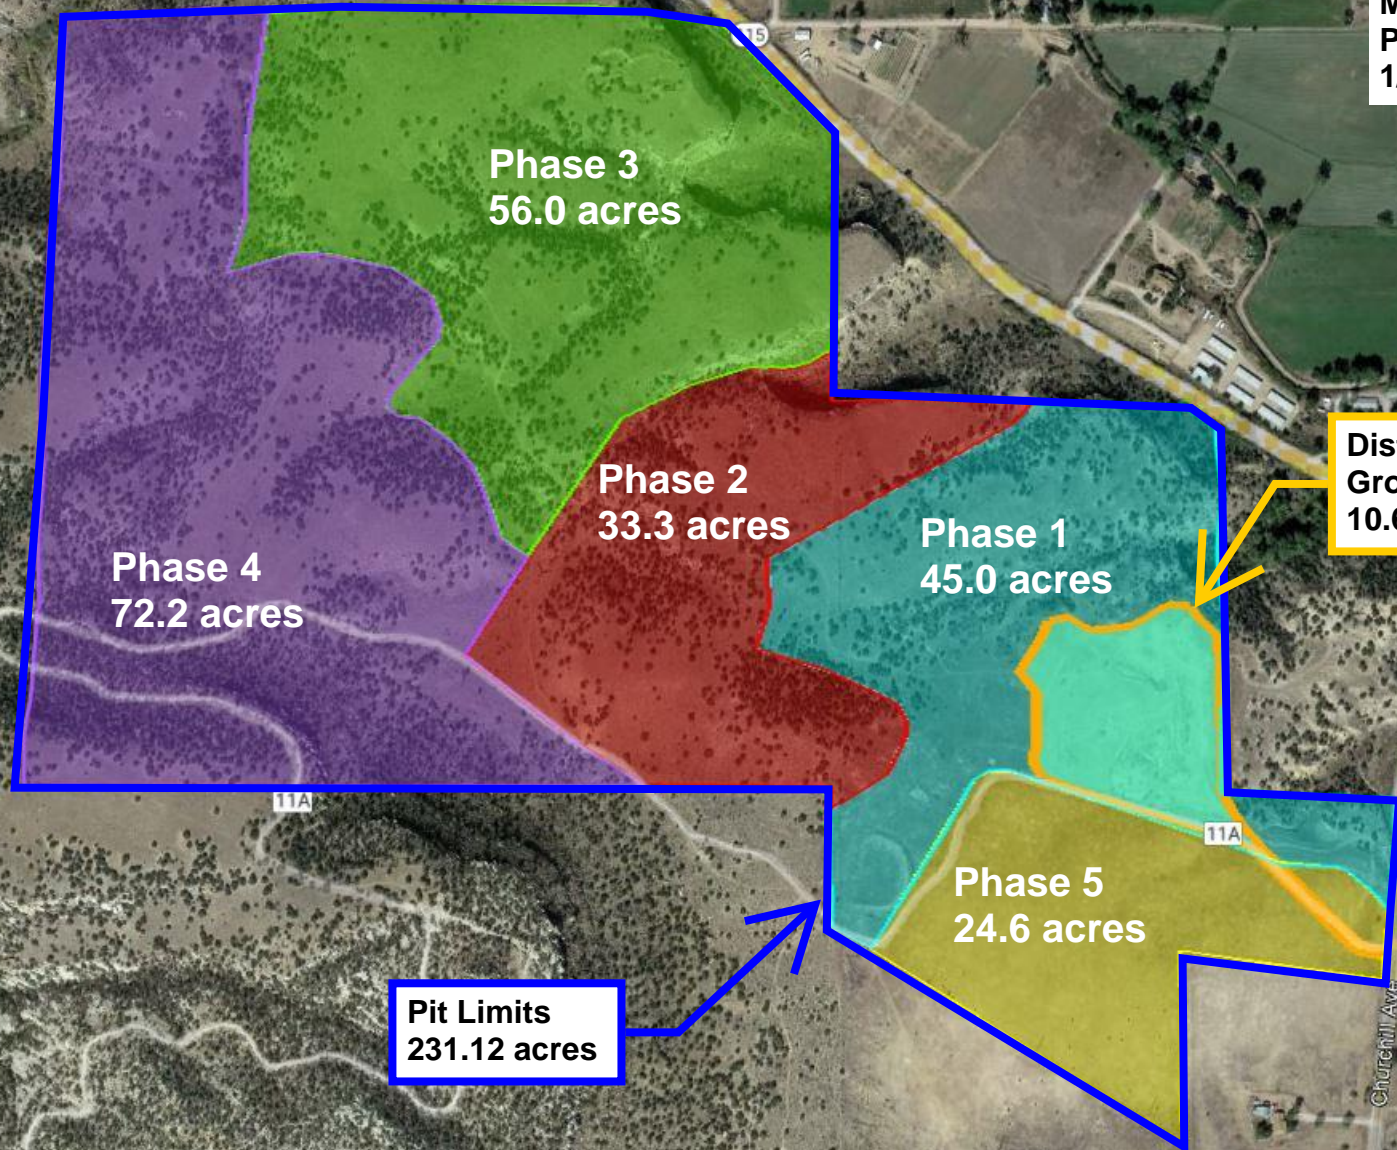

If you have any questions or need further information, please let me know.

Thank you,

Jodi Schreiber
