Craig Sparrow Western Equipment & Truck Inc. 2055 1st Avenue Greeley, CO 80631

RE: Western Equipment & Truck Mine #1, File No. M-2023-043, Receipt of 112c Construction Materials Reclamation Permit Application Package; Adequacy Review #2

Dear Craig Sparrow:

On March 5, 2024, the Division of Reclamation, Mining and Safety (Division) received your adequacy response letter for the Western Equipment & Truck Mine #1 Permit Application, File No. M-2023-042. The Division has reviewed the above referenced adequacy review response letter and material submitted. The following is a list of the adequacy review items from the Division's January 12, 2024, first adequacy review letter followed by the response provided by Richard Miller and Engineering Analytics, Inc. If additional information or revision is required, it will be noted. If an item is resolved, that will be indicated.

### Responsibilities as a Permittee

1. Item No. 10 under this subsection of the Application Form on page 6 is initialed to indicate that this operation represents a joint venture/partnership. If this item was initialed in error, please submit a revised page 6 of the application which does not have Item No. 10 initialed. If No. 10 was not initialed in error, please submit with a revised Application Form, the appropriate power of attorney document which authorizes the signature of joint operators. Item No. 10 of the Application Form on page 6 needed to be correctly initialed. A revised page 6 has been provided with this correspondence. **Resolved.** 

### Certification

2. A company seal must be present on the Application Form. If no company seal exists, please write 'no seal' on a revised page 8 of the Application Form under the company seal section. Since no company seal exists, "no seal" has been added to page 8 of the Application Form. Resolved.

### **General Requirements of Exhibits**

- 3. Please add features to maps C-1 and F and to their legends which delineate between the proposed permit boundary, parcel area outline, and the area of minable acreage. Exhibit C shows that with a 50' offset, 64.2 acres of the 74.07 acre parcel will be mined and therefore considered affected area. This offset line has been labeled as the permit boundary. However, in order for equipment to enter and exit this 'permit boundary', it appears trucks would need to at some point pass through the 50' offset area shown on the map. Anywhere that mine equipment traversed across this offset area would also be considered affected land as per our definition under Rule 1.1(3) and would be subject to reclamation. Therefore, in order to keep consistency with our definitions and with page 1 of the Permit Application which states that 74.07 acres will be permitted, please revise the parcel boundary line on all maps to be labeled as the permit boundary. Additionally, please add to this new permit boundary line to delineate any area(s) that will serve as entrance and exit points for site equipment.
- 4. Pursuant to Rule 3.1.12(2), boundaries of the affected area will be marked by monuments or other markers that are clearly visible and adequate to delineate such boundaries. Please provide the Division with GPS locations for each of these boundary markers and / or a kmz file which outlines the exact permit boundary. GPS locations have been provided for each boundary marker. In addition, a shapefile has been included at the request of Hunter Ridley, which outlines the precise mine permit boundary. Resolved.
- 5. Please add a label and line to all site maps to outline where any transmission or utility lines as referenced in Exhibit C are located. Please also outline and label the location of the southern oil and gas facility on all maps. Ensure that a proper legend accompanies these features. The transmission/utility lines have been added to all site maps, and the legends have been modified to include the transmission/utility lines. The oil and gas facility, located near the southwest corner of the subject parcel, has been added to all maps, and the legends have been modified to reflect this addition. **Resolved.**

### 6.4.3 Exhibit C - Pre-mining and Mining Plan Map(s) of Affected Land

6. Please identify the structure located in the northeast corner of the 70.25 acre Raptor Materials LLC parcel which is south of the proposed operation area. If this is a structure within 200 feet of the proposed permit boundary, please obtain a structures agreement for this feature pursuant to Rule 6.4.19. The structure located at the northeast corner of the Raptor Materials LLC is a PDC tank farm. Richard Miller is obtaining a structures agreement from them. Resolved.

7. Pursuant to Rule 6.4.3(g), please update the label for the parcel owned by Van Maanen to state what type of structure is located in the parcel. Ensure that any additional structures outlined on the map through this adequacy review also indicate the type of structure present. Exhibit C-1 has been modified to reflect that the Van Maanen property is a private residence. **Resolved.** 

### 6.4.4 Exhibit D - Mining Plan

- 8. The proposed mining plan states that the area to be mined has ~24 26 inches of topsoil available and that mining activity would strip ~10 12 inches of topsoil. Using conservative estimates, this would leave ~ 12 inches of topsoil still on the mined area. If this is the case, please clarify for the Division why the proposed plan only commits to leaving a minimum of 2 inches of topsoil over the gravely sand subsoil. Please also update Exhibit E to include this clarification. The proposed minable depth was set at 10-12 inches to meet our client's requirements for mining profitability. The estimated topsoil does state 24-26 inches of minable topsoil. The proposed mining depth has been revised to be 10 to 20 inches. We updated our commitment to leave at minimum 6 inches of topsoil to meet all regulations and promote the best seed growth. Without mining the area, difficult to know the exact minable area and depth of topsoil. Exhibits, E, F and D has been modified to clarify the depth of the topsoil to be mined. Resolved.
- 9. Should transportation of recently mined 'live' topsoil be halted or prolonged for any reason, please provide a statement within the mining plan which indicates that topsoil which will not be moved within a short enough timeframe to avoid deterioration of the topsoil and/ or erosion will be appropriately seeded pursuant to Rule 3.1.9(1). Topsoil which will not be moved within a short enough timeframe, to avoid deterioration of the topsoil and/or erosion, will be appropriately seeded pursuant to Rule 3.1.9(1). Resolved.

### 6.4.5 Exhibit E -Reclamation Plan

- 10. Is the buffalograss seed application rate of "10 pounds of seed per acre" referenced in Section 4.0 of the Reclamation Plan the PLS (pure live seed) per acres measurement for the intended revegetation? If not, please provide this figure in terms of PLS. *The buffalo grass seed application will be applied at rathe of 10 pounds of pure live seed (PLS) per acre.* **Resolved.**
- 11. Pursuant to Rule 6.4.5(e), please provide an approximate timetable reference to when reclamation activities will begin and end. In an effort to protect topsoil to be used for onsite reclamation, the Division encourages concurrent reclamation and immediate reseeding of areas once they have been stripped of topsoil product. Please address this within the narrative of Exhibit E. *The approximate timetable for reseeding will occur in*

- late spring or early summer to promote the most effective grass growth. Planting outside of these seasons would not be recommended due to limited effectiveness. Narrative has been updated In Exhibit E to reflect this proposed timeline. **Resolved.**
- 12. Pursuant to Rule 6.4.5(f)(ii), please suggest an expected time(s) of seeding and planting of buffalograss. The approximate timetable for reseeding will occur in late spring, early summer, late fall to promote the most effective grass growth. Planting outside of these seasons would not be recommended. **Resolved.**

### 6.4.7 Exhibit G – Water Information

- 13. Section 2.0 and 3.0 of Exhibit G state that 8-10 inches of topsoil will be removed during mining operations. Exhibits D and E state that 10-12 inches of topsoil will be removed. Please revise the relevant sections to be consistent with each other. *Topsoil removal depths for Exhibits G, D, and E have been modified for consistency with the focus on leaving at least 6" of topsoil at a minimum to promote efficient revegetation.* **Resolved.**
- 14. Pursuant to Rule 6.4.7(3), The Operator/Applicant shall provide an estimate of the project water requirements including flow rates and annual volumes for the development, mining and reclamation phases of the project. Please provide these approximations regarding the proposed use of a 2,000 gallon water truck. It is anticipated that the truck will be filled four times a day for a total of 8000 gallons of water applied per day. With our maximum intended schedule of 6 days a week for 50 weeks, the estimate comes to 2,400,000 gallons of annual water usage for dust control. The work schedule uses 50 weeks to anticipate holidays and winter weather that would make mining operations undesirable. **Resolved.**
- 15. Please update Section 4.0 of this Exhibit to include a specific reference to which municipal water sources will be used to fulfill the needs of the operation. *The water will be obtained from the Central Weld County Water District water filling station.* **Resolved.**

### **6.4.9 Exhibit I – Soils Information**

16. Please provide the Division with a copy of the full Web Soil Survey report done for the proposed operation site area. *A copy of the Web Soil Survey has been provided with Exhibit I.* **Resolved.** 

### 6.4.10 Exhibit J – Vegetation Information

17. This section states that the proposed post-mining land use is as a recreational vehicle storage facility. All previous sections of the permit state that the post-mining land use is general agriculture. Will the post-mining land use be general agriculture or recreational

storage? Please update the relevant text to include this clarification. *Exhibit J has been modified to indicate that the post-mining land use will be general agriculture.* **Resolved.** 

### 6.4.12 Exhibit L - Reclamation Costs

18. The Division has calculated a reclamation cost estimate for the Western Equipment & Truck Mine #1 based on the above adequacy review responses. A copy of the estimate has been provided with this letter. The Division requests that Western Equipment & Truck Inc. review this calculation and submit any questions before the application decision date.

### 6. 4.19 Permanent Man-made Structures

- 19. Please ensure that a structures agreement is obtained for all utilities within 200 feet of the proposed permit boundary. Aerial imagery suggests that this would include the overhead power lines to the north, south, and west as referenced in Exhibit C. The applicant may supply a notarized letter, on utility letterhead, from the owner(s) of the utility that the mining and reclamation activities, as proposed, will have 'no negative effect' on their utility. Structure Agreements were sent to the following entities within 200 feet of the proposed permit boundary. \*Resolved.
- 20. Please obtain a structures agreement for the Oil & Gas facilities to the south of the proposed operation, Highway 34, and CR 49 since these structures lie within 200 feet of the proposed permit boundary. Structure Agreements were sent to the following entities within 200 feet of the proposed permit boundary. \*Resolved.

\*Please note that the above items #19 and #20 have been marked resolved only for the purpose of tracking Western Equipment & Truck Mine, Inc's attempts to receive signed agreements (as proven by certified mail receipts). However, no signed and returned structures agreements have been received by the Division as of the date of this letter. If Western Equipment & Truck, Inc. does not receive and submit signed structures agreements for all structures listed within 200 ft of the permit boundary before the decision due date, the Operator will need to submit an appropriate engineering evaluation, signed by a certified P.E., that demonstrates that such structures shall not be damaged by activities occurring at the mining operation, pursuant to Rule 6.4.19. This evaluation letter will need to be received prior to application approval.

This concludes the Division's review of this adequacy response. This letter shall not be interpreted to mean that there are no other technical deficiencies in your application; other issues may arise as additional information is supplied. Please be advised the permit application may be deemed inadequate, and the application may be denied on March 20, 2024, unless the above

mentioned adequacy review items are addressed to the satisfaction of the Division. If more time is needed to complete the reply, the Division can grant an extension to the decision date. This will be done upon receipt of a written waiver of the Applicant's right to a decision by March 20, 2024, and the request for additional time. This must be received no later than the deadline date.

If you have any questions, please contact me at (720) 868-7757 or by email at hunter.ridley@state.co.us.

Sincerely,

Hunter C. Ridley

**Environmental Protection Specialist**
