Re: Annual Report M1981-207, Blue Pit

04/03/2024

Mining has continued North in phase 2 the past year. Additional mining is being performed with haul trucks to remove the southwest floor area. Approximately 38,000 cubic yards of imported inert fill dirt was placed mid-mining area to raise floor to lessen reclaim slope height. Approximately 1,200 L.F. of high wall is open in phase 2 as mining progress north.

A handwritten signature in blue ink, appearing to read "SM", is positioned above a solid horizontal line.
