

## Mining and Reclamation Plan for Four X Ranch Gravel Pit Proposed Amendment 2024

-Whereas the current mining operations that were commenced by the previous owner of the permit encompass our proposed Phase I, which includes proposed Section A and proposed section B:

- Mining operations in section A to continue currently, with reclamation utilizing Exhibit E (Reclamation plan and reseeding plan) as approved with originally approved construction materials regular (112) reclamation permit application form dated June 6, 2014. Once gravel material has been removed, reclamation will begin from south end of proposed boundary line, moving north.

- When Section A has been reclaimed, our mining operation will be moved onto section B, until the gravel material has been removed. At which point our reclamation will begin, moving South to North.

- As Section B is set to be reclaimed, mining operations will advance north, into Sections C and D.

-The amended mining area will allow for mining and reclamation to be conducted congruently from south to north, allowing for the cleanup and reclamation of areas mined by previous owner, and current operations.
