gquist@hotmail.com

Approved Start date June 8th 2023 from DRMS and USDA Forest Service.

We walked the machine and took the gates up to the mine on the 8th of June.

The installation of both gates completed on June 10th and work completed on the road and water bars. On June 12th walked the machine the rest of the way to the mine and started digging on the Three and Four Point Claims. Pegmatite was found during the season. All general maintenance was done on the site during the season. Checking posts and signs etc.. Orange fencing was installed and taken down at the end of the season after reclamation was completed graded seeded and raked by October 11th. The 9040B case was walked off the site and road work was done on the way out on October 20th.

Note* - The Annual Report does not allow for two or more decimal points to be put in.

So the .5 acre is not correct. It is actually less approximately .46.

Thank you. Sincerely! George L. Quist
