Re: Trapper Mining Inc., Permit No. C-1981-010

Technical Revision TR-136: 2023 Annual Reclamation Report Adequacy Response #1

Dear Ms. Reilley:

Below is our response to your Adequacy Review letter of April 9th 2024 to Trapper's Technical Revision TR-136 application. We have used your original letter as the base format, with our response following each of your comments.

DRMS

9 April 2024

Section 3.6.3.5 of Trapper's Mining and Reclamation permit provides various tables listing seed mixes for reclamation of the different range types at TMI. These lists provide the scientific names. The seed mixes proposed by TMI in the annual report appear adequate, however it is difficult to compare changes as the lists in the ARR only provide the common plant name.

Trapper Response to Comment: Section 7 of the Annual Reclamation Report, Tables 7-1 through 7-4 have been revised to include the scientific name of each plant species considered for seeding. There have been numerous taxonomic name changes for several of the plant species since the original permit lists were established. Where the names differ from the materials presented in the PAP the prior name is listed as an alternative "alt" name.

Due to the nature of the "epermitting" report, the entire report has been included with the revised pages included. The only applicable changes are to Tables 7-1 through 7-4 of Section 7.

Please get back to us with any questions, comments or concerns.

Sincerely,

A handwritten signature in cursive script, appearing to read "Graham Roberts", followed by a horizontal line.

Graham Roberts
