Jerry –

Below are answers to your questions on your objection you provided to the DRMS. I have also attached updated maps based on the answers to the questions below.

1. No berms are being built on the west side of the property within the floodplain for the proposed mining and reclamation. The reclaimed reservoir will be below the existing topography. A riprap rundown is shown on the west side of the reservoir to help protect the bank of the reclaimed reservoir where water has historically entered this area. No flows will be impeded from what their existing flow paths or depths are in times of flooding in the area.
2. W.W. Clyde has provided a 400 foot setback from the river to keep more riparian area next to the river larger per CPW's comments as well to keep the area for wildlife and movement of wildlife. The reclaimed reservoir will also create more opportunity for waterfowl in the area.

We have also provided a party withdraw form that we would like you to sign if you are comfortable with the information we have provided and if you have additional questions please let us know so we may be able to provide more information if needed.

Regards,

J.C.
