**Re: Additional Information Required, Annual Groundwater Level Data for 2023-2024,
Greeley 35th Ave. Pit, Permit No. M-1977-036**

Dear Ms. Mikulas:

On August 16, 2024, the Division of Reclamation, Mining and Safety (Division/DRMS) received your Annual Groundwater Level Data for 2023-2024 for the Greeley 35th Ave. Pit. After review of the submission the Division has additional items that need to be addressed or clarified.

1. The elevation used to calculate the groundwater elevations at monitoring wells 35th Ave 12 and Brown 2 are the same, 4673 feet. A review of Google Earth and topographical maps for the area along with the Division's experience, it does not seem likely that this elevation is exactly the same for both wells, as presented, given how far apart the wells are from one another. There appears to be an elevation difference of approximately 7 feet between the two locations. Please verify if the elevation being used to calculate groundwater elevations at these two wells is the same. If not, please update the table with the correct elevations and resubmit the table with the updated information.
2. The replacement wells MW-7 and MW-8 have not been surveyed despite being installed for a year. Is there a schedule to survey the wells to accurately collect groundwater level data at the site?

Please respond to these items within 30 days of the date on this letter, by **September 18, 2024**. The Division reserves the right to further supplement this document with additional items and details as necessary.

If you need additional information or have any questions, please contact me by email at patrick.lennberg@state.co.us.

Sincerely,

Patrick Lennberg
Environmental Protection Specialist
