

EXHIBIT E-2 MINING MAP SOUTH HINSDALE PIT Sand and Gravel

Located on Dancing Winds Ranch
On USFS Road 161 (Piedra Road)

Preparation work: Install storm water controls and construct access and strip soil to build berms/stockpiles. Begin mining on west edge of work area. Based on USFS concurrence, access will use one of the options (Ex E-1) and mining will either precede as shown (clockwise A-E) or counterclockwise (E-A). DENR will be notified of decision.

Excavation of Kleckner Lane will require approval by USFS on changes to FSR-633. Areas of minimal disturbance will NOT be mined but will be minimally affected by measures to protect streams, control storm water, and ensure long-term stability. Phases A-E range in size from 2-3 acres, and depending on depth of deposit, will each take a year or less to mine and reclaim.

Contour Interval 10 feet 1"=120ft (1:14,400)
Data from Filed plats and USFS, USGS, and State of Colorado Mapping. Drawn by Nathan A. Barton, CE, PE, DEE WASTELINE, INC.
