

Additional Security Gates; BME will be installing three additional security gates. One at the easternmost corner of the existing haul road directly South of the RP-2/3 and RP-1 Refuse Pits. A second at the entrance to the small access road leading from CR 73 to Rescue Shaft RS-4R. The last additional gate will be installed on the Western side of the intersection of the man haul road and CR 65. These additional gates are necessary to prevent access and tampering with important mine infrastructure and mine workings during holidays or other instances when the staffing at the mine is at very low levels.
