

## Interoffice Memorandum

To: File for M-1977-205 (Tri-County Gravel)  
From: Rob Zuber *RZ*  
Date: February 3, 2025  
Subject: Purpose of AD-01 and acreage adjustment

This administrative revision adjusted acreages due to errors in the Permit System. It appears that during the processing of AM-02 and other actions, the Division erroneously added 82.17 acres to the permit area twice. The Division has checked records (including maps) and discussed this issue with the operator, and the correct Permit Area should be 192.1 acres, not 274.27 acres.

Other revisions include the following:

- The actual Affected Acreage was set to 0.00 because it appeared to be incorrect, and because this parameter is normally not tracked in the Permit System.
- The Maximum Allowed Affected Acreage was set to match the Permit Acreage of 192.1 acres. This value also appeared to be incorrect prior to this adjustment.
- Private Mineral Acreage was set to 0.00 because it appeared to be incorrect, and because (like actual Affected Acreage) this parameter is normally not tracked in the Permit System.
