

## Supplemental Information

M1992074

While preparing the map for the Annual Report, a discrepancy in the permitted acreage was discovered. Our current permitted acreage shows as 82.1 acres, which represents the original permitted acreage (50.7 acres) and the expanded acreage approved in Amendment No. 1 (31.4 acres). However, computing the area within the permit boundary shows an area of 82.8 acres. There are 2 factors that lead to the revised acreage. An updated survey of the original permitted area provides an acreage of 50.0 acres, as opposed to the 50.7 acres. Technical Revision TR-001, approved in 1995, increased the original permitted area by 1.4 acres.

Original Permitted Acreage (corrected)	50.0 acres
TR-001	1.4 acres
<u>Amendment No. 1</u>	<u>31.4 acres</u>
Total Acreage	82.8 acres

This updated acreage is reflected on the Map submitted with the Annual Report. The revised acreage does not change any of the previously approved permitted boundaries. We request that the Division of Reclamation, Mining and Safety records be updated to reflect this acreage.
