Re: Annual Report M1981-207, Blue Pit

03/07/2025

Mining has continued West and North in the past year, approximately 8 acres was stripped of topsoil and overburden. Additional mining is being performed with haul trucks to remove the western floor area. Approximately 38,000 cubic yards of imported inert fill dirt was placed mid-mining area to raise floor to lessen reclaim slope height.

A handwritten signature in blue ink, appearing to read "S Mello", is written over a horizontal line.
