Wed, Mar 26, 2025 at 11:54 AM

To: Chris Girardi <chris.girardi@state.co.us>, "Pike, James D" <jpike@blm.gov>

Hi Chris and Daniel,

In response to your letter dated 3-12-2025, I am responding to the questions in your letter of the above date.

- We finished drilling on 3-7-2025 and the drill crew left the site on 3-21-2025 after surface reclamation (seeding is planned to be done during April).
- The drill hole is located at UTM coordinates 4460215, 4224181 (NAD 83). The area disturbed was measured to be 0.4 acres, instead of the estimated disturbance in the NOI of 0.25 acres. This was in part due to less field supervision than expected. A map is attached as well as a close air-photo of the immediate vicinity of the hole and the actual reclamation costs excluding the final grading and seeding. The time for the reclamation was longer than needed as de-watering of the sumps took longer than usual.
- No artesian flow was encountered.
- (i)The hole was abandoned using the drill string as a tremie pipe. Displacing the rod volume while pulling the rods and pumping a 35% by volume bentonite slurry (Groutwell DF) with a mash funnel viscosity of 68 from the bottom of the hole 3752 feet Beneath Ground Level to 20 feet B.G.L. and was capped using Portland neat cement (6.5 Gallon of water per sack of cement). The top 1 foot is natural top soil.
- The final report will be filed after seeding is completed.

Viscount is requesting that the hole abandonment bond in the amount of \$53,136 as the borehole has been sealed.

I hope this covers what the DRMS and the BLM needs. If not, please let me know what additional information is needed.

Sincerely,

Harald Hoegberg
