

C&J Gravel Products would like to ask DRMS to consider the following for full and partial releases. The total combined acres between BLM and private belonging to Gilleland Enterprises would be 24.78 acres total. It would break down as follows.

*Full release on 5.68 acres

- 1.96 acres on the slopes in front of the shop on Gilleland Enterprises property. Reclamation and seeding have been complete for 15 years. The slopes have been proved to be stable and there is ample vegetation.

-3.72 acres on the slopes above the reclamation access road above the office ON BLM property. The reclamation was completed at the same time as the 1.96 acres.

*Partial release on 19.10 acres

- This area consists of the slopes below the reclamation access road going North to the back Northwest corner, along with a small corner of the pit floor in the corner. Reclamation has been complete for 7 years. The slopes are stable with the few exceptions of minimal runnels that we have been addressing. We have hand broad casted seed several times. Given the circumstances of the drought, we have been in these past several years we have not gotten as much vegetation sprouting as desired.

1.96 acres full release on private

3.72 acres full release on BLM

19.10 acres partial release on BLM

Please contact me with any questions. Thanks
