Good Morning Joel,

I wanted to provide you with a status update on the requirements related to reclamation of the Sedgwick County soil borrow area. Last week we were able to complete an existing conditions site survey and have prepared those topo maps plus have developed regrading plans consistent with the general final reclamation and site restoration plan and surface water management strategy submitted with the original permit application for the site as a construction borrow area. With a June 6 deadline approaching for submittal of a permit application to the Division for this site as a sand and gravel mining operation under your jurisdiction, we have a few questions regarding the form of the submittals and would like to arrange a phone conference with you this week or early next week at your convenience to discuss. Please let me know what your availability for such might be and we will send an invitation for a TEAMS call.

On a related matter, would it be possible to extend the submittal deadline for the final reclamation permit documentation to the Division by thirty (30) days to July 6, 2025? We have some conflicts internally for resources and will have some difficulty in getting you what you require by the June 6 deadline. We would appreciate your consideration of this request.

Best regards,

Bill
