To CO. DRMS, We are reducing our five acre mine site to a two acre mine site on the Three- & Four-Point claims and moving Three acres to our Silver Microcline and Hilltop Claims. The disturbance total from the 2024 mining season on the Three- and Four-Point mining claims, Permit # M-2023-002 is 1.17 acres (.46 disturbed from 2023), for a total of 1.63 (please note question #7, in the report does not allow for correct numeric values). There will be less than ¼ acre left to be dug on the two acre mine site on 3&4 Point in the 2025 season. Reclamation will be done upon completion of digging on the site and has been done along with seeding on most of the area already. The three remaining acres are to be moved to the Silver Microcline and Hilltop Claims, putting them under the M-2023-002 Permit. Even though we are permitting 3 acres on this site (Silver Microcline and Hilltop) there are only 2 diggable acres on this area because of the bolder field. This move will occur upon the final approval by the CO. DRMS. The continuation of monitoring for noxious weeds will continue on all claims, along with general checking of posts, signs, gates and other disturbances. The supporting maps are attached in this report.

Thank you! George L. Quist
