Don:

As a result of Natural Soda LLC's (NS) routine well maintenance program, NS suspected a casing issue in the 17H subsurface subsidence monitor well (SSMW). After NS ran a series of logs including a video camera, it became apparent that the 4.5" diameter casing was compromised. A video camera run conducted on December 11, 2025 visually confirmed a parted casing collar at a depth of approximately 1,620 feet MD GL in the R-6 Zone. The decision has been made to plug and abandon (P&A) this well. Plans will be formulated to P&A this well and to replace this SSMW at an alternate location subsequent to permitting and approvals and in coordination with the BLM.

Please let me know if you have any questions.

Best Regards,
Jerry
