**Subject:** RE: FW: Twentymile Coal, LLC - NOV CV-2011005 Abatement

Jason –

Attached is a field report and photos (sent as three e-mails due to size) from our Wednesday, October 12th final inspection of the completed abatement activities, for the above-referenced NOV. The following summarizes the current status of the NOV abatement activities:

- All waste material has been removed from Deakin's Pit and transported to Twentymile , and the prior stockpile area has been cleaned-up to bare soil
- Bower has completed processing and segregation of the waste materials at the Ross Pit, and has transported all of the fines (No. 4 product, as identified in 09/28 Report) to Twentymile for placement and disposal in the Coal Refuse Disposal Area
- All of the intermediate coally material (Nos. 2 and 3 products) has also been transported to Twentymile, where it has been windrowed adjacent to the Run-of-Mine Coal Stockpile, and incorporated into the Washplant feed, after being inspected for any debris
- Bower has completed removal and segregation of all debris (ie: wood, metal, cable and hose, concrete block, etc.) from the coarse reject material from the initial grizzly, has loaded and transported all coal and rock from the coarse product to Twentymile, and was completing loading of the final truckload of debris at the time of the inspection for transport to the Twin Landfill
- Cleanup of the previous stockpile areas and the area under and around the screening plant had been completed down to bare soil

Based on our site observations, and the information provided in this report, the final abatement step was completed today, and the sites (Deakins and Ross Pits) are ready for the CDRMS's verification inspection. Based on our subsequent phone conversation, the final verification inspection is scheduled for 1:00PM on Wednesday, October 19<sup>th</sup> -

Best regards,

Jerry

## TWENTYMILE COAL, LLC FIELD REPORT

Date: 10/12/11 2:30 PM

Location: POWER PROD. ROAD 1/2 SE OF CRAIG

Conditions: SUNNY, CLEAR, COOL, DRY

TC Personnel: TERRY NICKLETON

Persons Contacted: JOHN BOWEN

Purpose of Field Visit: Final site visit to verify & document completion of waste processing, segregation, removal, and clean-up activities

Field Notes: Based on previous field inspections, all waste processing and segregation had been completed by Tuesday (10/11), and most of the segregated products had been removed from the site and transported to the designated disposal locations (Twenty mile or Twin Landfill)

At the time of this inspection, Power Prod. employees were loading segregated trash materials (wood, steel, black cable, etc.) into final truck for transport to Twin Landfill

Site cleanup had been completed down to bare soil, as documented by photos
