Dear Mr. Kaldenbach:

**Re: Hansen Uranium Project (P-2009-025)
Modification**

On behalf of Black Range Minerals (BLR), I wish to clarify the modification of Prospecting Permit # P-2009-025 requested in our letter dated April 5, 2012.

The requested modification proposed to increase the permitted borehole diameter from 6 inches up to 24 inches to conduct exploration and collect sample materials. The drilling method used for the proposed 24-inch borehole is the same as that is currently allowed under the current BLR permit for prospecting. Comments 2 through 5 in your response letter dated April 9, 2012 appear to address issues that could be of concern for a mining operation, versus the exploration and sample collecting focus of our current work and the work proposed under our request for modification.

BLR has subsequently concluded that at this time we will be able to continue conducting needed exploration activities under our current permit and bonding conditions. We therefore wish to withdraw our request for modification.

Yours sincerely,

Patrick Siglin
Geologist
