Dustin,

In response to the letter we received from DRMS on 5/23/2013, I am providing comments regarding the M-2013-026 application. BLM is required to prepare an Environmental Assessment under NEPA upon the receipt of a mining plan of operations for locatable minerals.

As we never received anything formal from the operator and just recently were able to access the 110(2) application on the DRMS website, this process has not yet been completed. Lockland, LLC (Mr. Calder) does not currently have a "right-of-entry" for initiation of the proposed mining operations.

Due to the history of the site, some of the main resource area assessments that are included in the NEPA process have already been completed, which should help streamline the remaining components.

Please continue to coordinate with me regarding the M-2013-026 application process, to include correspondence, bonding calculations, etc.

Thank you,

Stephanie Carter, P.G.
Geologist
