Dustin,

Please find attached photos of the corrective action for the above referenced pit. We have already submitted to increase on the warranty bond. Please let me know if you have any questions or require further information. Thank you

Denise,

Here are the updated BV Pit pictures.

We got tired of waiting on Scott Pelino we just took care of it ourselves.

-Figure 1 is the far west gully that has been filled, graded and re-seeded.

-Figure 1-1 is the access road that goes through the north end of the property, we slopped the road to the adjacent slope so flow would continue down the road and not cross it. We also replaced the safety berm bordering the pit and re-seeded it.

-Figure 2 is the center gully which is fed by a culvert at the top end that crosses underneath the access road; the culvert is not on our property. We decided to keep the drainage and address the flow and sediment control. We placed check dams and a 10' long rip rap flare at the top and bottom of the slope.

-Figure 2-1 is showing the rip rap flare at the bottom of the slope

-Figure 3 is the far east gully that is much of the same at figure 2. The water cannot be diverted so we decided to control the flow and sediment in the same fashion as figure 2.

- All disturbed areas have been reseeded

Please let me know if this is sufficient enough.
